CM 1603 CW

Q1

- 1. MAIN ENTITIES
 - Librarian
 - Book
 - BookCopy
 - User
 - Journal
 - > Article

SUPER ENTITY- Publication

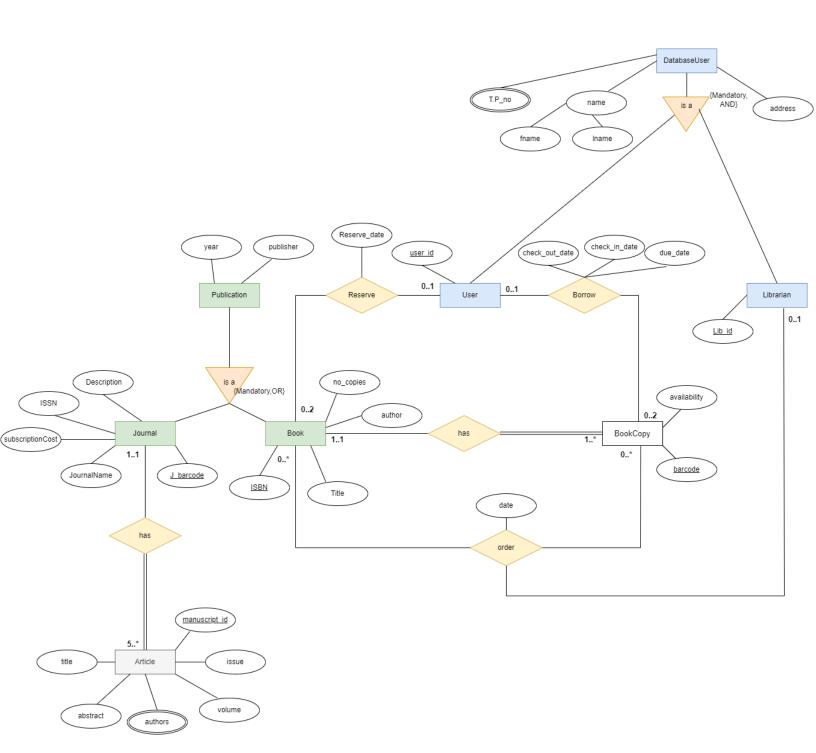

DatabaseUser

2. RELATIONSHIP BETWEEN ENTITIES

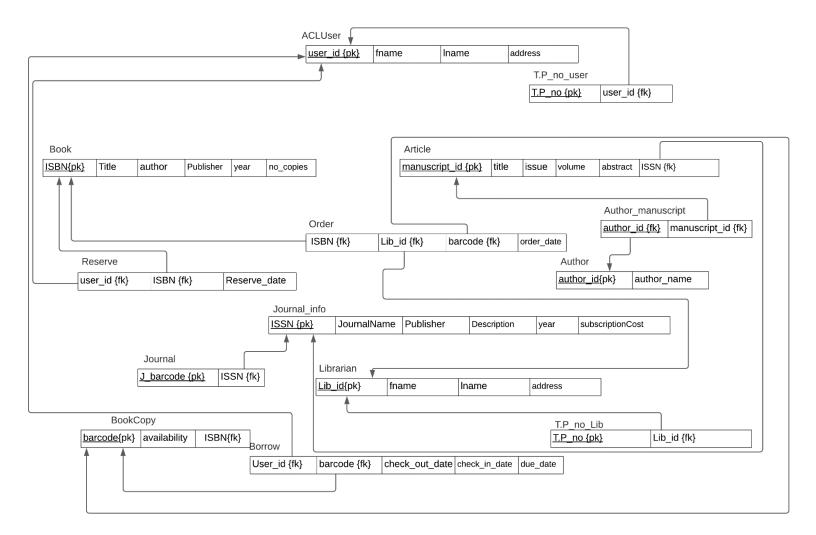

- User reserve Book
- User borrow BookCopy
- > Journal has Article
- Book has BookCopy
- ➤ Librarian order Book and BookCopy

3. PRIMARY KEYS OF ENTITIES

- User pk- user_id
- Librarian pk- Lib_id
- ➤ Book-ISBN
- BookCopy- barcode
- Journal-J_barcode
- Article-manuscript_id

S

Assumptions that were took when drawing the ER diagram and relational schema Journal and books have some common attributes, and it is generalized as a publication. Here, Mandatory optional is used assuming there is no other type of publication available and since one type of publication cannot be another type at ACL.

And further, librarians and users are people who involve in using the database have common attributes as well. Therefore, those entities are generalized as ACLUser. Here, mandatory and is used since librarians can borrow books. And though users can't be a librarian, a librarian can be a user.

It is assumed that one user can borrow and reserve two books the most.

It is assumed that ACL doesn't offer renewals. If renewals are considered the due date of the borrowing record of that specific user's specific book should be extended.

Also, it is assumed that one user borrows one book only once. If a user borrows again later period, then to identify a particular record of borrow table another attribute (ie. check out date) should be considered as a composite primary key along with user_id and barcode of the book.

Also, one user can reserve a particular book again at a later period. In that case, another attribute should be taken as a part of the composite primary key to identify a particular record uniquely. Here, it is assumed that one user reserves one book only once.

Here, it is assumed that one user or librarian can have more than one telephone number.

Also, it is assumed any type of journal's issue has at least 5 articles.

Also, it is assumed that an article can be written by several authors. Thus, the author attribute of the article is considered as a multivalued attribute. And different authors can have the same name. therefore, an author id is given to differentiate them.

Also, it is assumed that check-ins are made on or before the deadline and no monetary fine system is enforced assuming ACL doesn't have one.

Journal subscription is considered as library subscribing to different types of journals and that cost is taken as subscription cost. And it is assumed that journals are not available for lending and the library has only one copy for one journal issue of a volume. Therefore, copy numbers of journals are not maintained here. If there are numerous copies of journals, then they should be maintained properly.

Here, details of all subscribed journals and, all issues of those journals are maintained.

Here, different types of journals that are subscribed can be identified with the ISSN number. And all those issues are identified with an id-journal id-given by ACL.

Also, it is assumed that a new book or new copy of an existing title is purchased (ordered) and updated as a book to book entity itself and book copy to book copy entity respectively.

Here, it can be assumed that a book has at least one copy. Otherwise, even if a book is their user won't be able to borrow. Therefore, the number of copies can be assumed to have a default value of 1 if ACL purchases new books or purchased books with at least one copy.

Database creation and ACLUser table creation

```
Code

CREATE TABLE ACLUSER

(

user_id varchar(8) NOT NULL,

fname varchar(25) NOT NULL,

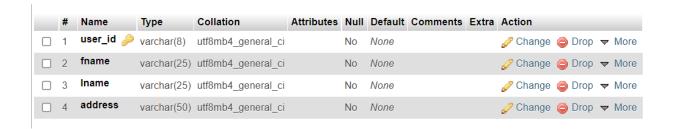

Iname varchar(25) NOT NULL,

address varchar (50) NOT NULL,

PRIMARY KEY (user_id)
```

output

);

tp_no_user table creation

);

Clear

Format

```
code

CREATE TABLE TP_no_user

(

TP_no char(10) NOT NULL,

user_id varchar(8) NOT NULL,

PRIMARY KEY (TP_no),

FOREIGN KEY (user_id) REFERENCES ACLUSer(user_id)
```

```
1 CREATE TABLE TP_no_user
2 (
3     TP_no char(10) NOT NULL,
4     user_id varchar(8) NOT NULL,

Q5

a) Code

SELECT Title FROM book WHERE Year_published='2000';

b)code

SELECT Publisher, Description

FROM journal_info

WHERE JournalName='The Wisdom';

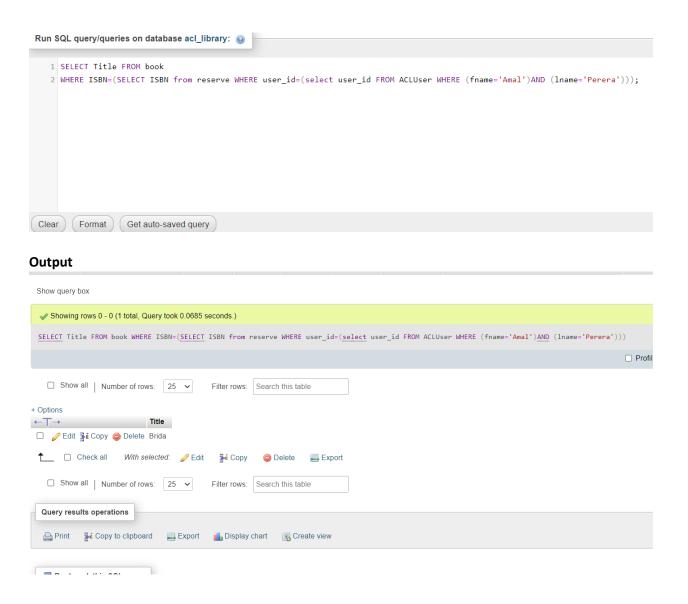

c)code

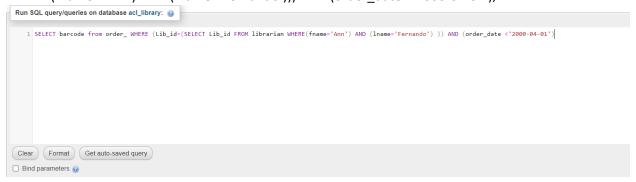

SELECT Title FROM book

WHERE ISBN=(SELECT ISBN from reserve WHERE user_id=(select user_id FROM ACLUSER WHERE (fname='Amal')AND (Iname='Perera')));

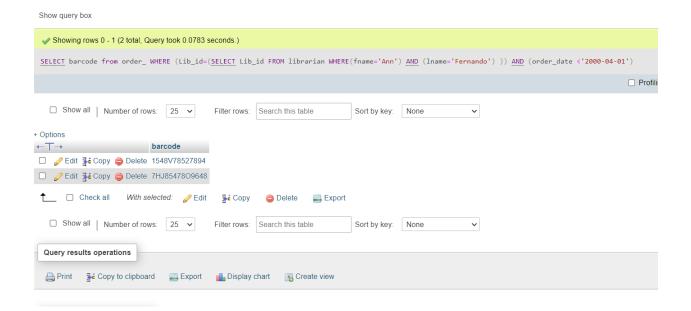

d)code

SELECT barcode from order_ WHERE (Lib_id=(SELECT Lib_id FROM librarian WHERE(fname='Ann') AND (lname='Fernando'))) AND (order_date <'2000-04-01');

Output

2 book copies
